

JULY 16, 2026 | CODY MCLANE AND THE LAB37 HIRING TEAM

Bowl Builder is not simply a robot. It is a complete product system for turning an order into food that is accurate, timely, traceable, operable, and economically repeatable.

WHY THIS ROLE

That is why the Robotics Product Manager opportunity feels so aligned with the work I enjoy most. The product has to reconcile mechanical design, software, ingredient behavior, telemetry, operator workflow, manufacturing, support, customer experience, and unit economics in the real world. My career has repeatedly placed me at those intersections, translating field reality into product and operating decisions.

RELEVANT EVIDENCE

- ? At Vape-Jet, I lead product-facing operating work in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots. I connect fleet signals, customer support, error codes, production, quality, purchasing, software issue flow, Jira, ERP/Odoo, training, and leadership review.
- ? At Amazon, I led the launch and execution of Prime Pittsburgh in a 24/7 customer-backward environment supporting roughly five million second-day orders annually.
- ? At Compunetics, I led engineering, manufacturing, quality, and customer delivery in high-reliability electronics, building fluency across complex assemblies, validation, lifecycle controls, supplier handoffs, and manufacturability.

CANDIDATE VISION

I created an independent candidate vision with a Bowl Builder Product Contract that connects recipe behavior, electromechanical performance, order truth, operator flow, serviceability, and economics to one release and pilot decision. The companion 90-day plan shows how I would read the system, prove one complete decision loop, and make the learning repeatable.

CLOSING

My thesis is simple: every release should make Bowl Builder easier to trust, easier to operate, and easier to scale. I would be excited to discuss where the team needs the most product clarity now. Carpe diem, Russell Dudek
